

Fall classes for Teens

3D Modeling

Attention future moviemakers and game developers! This is the first session of classes in a series of three sessions on 3D animation. Design your own 3D characters and props that are ready to animate using professional design software by Autodesk called 3DS Max. Classes in the second session will focus on animating your character and in the final session of classes you will bring everything together in an animated short film. *Ian Llanas.* \$100

Thursdays, 6-8

November 2,9,30, December 7,14

Note to prospective students and parents: Computers make it possible for people to accomplish things that a short time ago only big studios with huge budgets were able to do. However, no one has developed a "make it cool" button yet. Just because something is possible doesn't mean that it's easy. Our animation classes use professional tools and require hard work and time to master. Join us!

2D Animation

Join the exciting world of animation and use computers as timesaving tools to create your own animated short film along the lines of those found at www.homestarrunner.com and other web-based cartoons. Please come prepared with a short story in mind, your imagination fired up to create and a willingness to work hard. *Ian Llanas.* \$100

Saturdays, 12-2

November 4,11, December 2,9,16

Urban Photography

You'll learn how to compose really great pictures – inside, outside, everywhere - using an assortment of cameras. Then you will develop your film and experiment making prints in our darkroom. Bring a camera if you have one, supplies included. Limit 5 students. *Tracy Nielsen.* \$100

Sundays 1-3

October 22,29, November 5,12,19

Clothing Design

Walk the road less traveled in this class. Take already-made items and transform them into your own expression but also make items from scratch. Develop patterns for skirts, neckties, hats, shirts, and vests and learn how to make them. Find t-shirts and sweaters, take them apart, and make original garments. Bring sketches, pictures, and fabric if you want. Be prepared to redefine. *Tara Fahey.* \$100

Sundays 12-2

November 5,12,19, December 3,10

Electronic Music

Use the same tools that the pros use and make your own music using computers as a tool. Start with "loop" (or sample-based) based music - think hip-hop and techno - and when you get bored with our extensive library of over 3 Gigs of hi-quality samples, you can go deeper into music production and learn how to make things sound exactly the way you want. Or, learn how to sample popular songs and produce your first Top 40 hit! *Ian Llanas.* \$100

Fridays, 6-8

November 3,10, December 1,8,15

Registration Form

3D animation, \$100 Electronic music, \$100 2D animation, \$100 Fashion design, \$100 Photography, \$100
